“... As long as we can show measurable improvement every 2 weeks, we are justified to continue treating. Why is measured ROM so effective? It is recommended by Medicare, supported by the Mercy Guidelines and is backed up by the AMA Guides to the Evaluation of Permanent Impairment, 6th Edition, as a way to monitor clinical progress in individuals.”

Dr. Gregg Friedman, DC, CCSP, FIACA, Got Documentation Seminars

“... opportunity is patient education. Proof Preferred is a high tech examination tool that demonstrates to the patient their problem is more than pain. They are able to see for themselves their functional limitations and that translates to better compliance in working to correct the problem.

Using Proof Preferred has resulted in better patient compliance in following through with their recommended treatment plans. I have also had several attorney referrals based on the reports that show objective functional limitations.

Dr. Todd Stafford, Village West Chiropractic, Erie, Pennsylvania
