“... As long as we can show measurable improvement every 2 weeks, we are justified to continue treating. Why is measured ROM so effective? It is recommended by Medicare, supported by the Mercy Guidelines and is backed up by the AMA Guides to the Evaluation of Permanent Impairment, 6<sup>th</sup> Edition, as a way to monitor clinical progress in individuals.”

Dr. Gregg Friedman, DC, CCSP, FIACA, Got Documentation Seminars

“... Proof Preferred allows both the chiropractor and the patient to track their progress monthly. When a patient can see through objective testing that they are improving even though their symptoms have not resolved as quickly as they have wanted them to, they are more apt to complete the prescribed care plan and ultimately reach their health goal.”

Dr. Eric Waldorf, DC, Waldorf Chiropractic
